PCB Assembly Turn Time

At Advanced Assembly, our average turn-time is 5 days or less, including time spent resolving incomplete kits or design errors. Our quick-turn PCB assembly service is fair and straightforward – no fine print or hidden charges like other assembly shops.

Turn-time starts on the day all boards and parts arrive at our facility. Once the "clock" starts we:

- Verify all kits before assembly begins.
- Missing parts are resolved with customer.
- There are no extra fees for holds due to incomplete kits. Should incomplete kits place projects on-hold, Advanced Assembly does not charge additional fees for restarting orders once kits are complete.
- 100% of orders are always shipped, unless otherwise requested.
